

KABI

DESIGN JORGE PENSI

The KABI collection is the result of an exercise in design with the concept of obtaining the maximum amount of configurations using the minimum number of components.

The polypropylene shell is the key element of this collection with a timeless image. It provides great comfort thanks to the subtle flexibility of the material, this allows the user to find their most comfortable seating position naturally.

The KABI shell is available in a wide range of colours and can also be upholstered (seat only or fully) in fabric or soft leather.

The KABI program of seating consists of several pieces: from the basic chair with and without arms - ideally used in cafeterias, to the versions with swivel aluminum bases or multilaminated wooden legs - more suitable for the office and hotel interiors.
